

Does the modular function on a Lie group
(see e.g. http://en.wikipedia.org/wiki/Haar_measure) have a graphomorph/bi-
tracks interpretation? Is it related to odd wheels?

Write the Scatter and Glue program for
Z-knots! *In progress....*

$$[[a, b], [c, d]] = 1$$

$$\Leftrightarrow [a, b][c, d] = [c, d][a, b]$$

$$aba^{-1}b^{-1}cdc^{-1}d^{-1} = cdc^{-1}d^{-1}aba^{-1}b^{-1}$$

(it seems that this cannot be written
using only positive powers).
