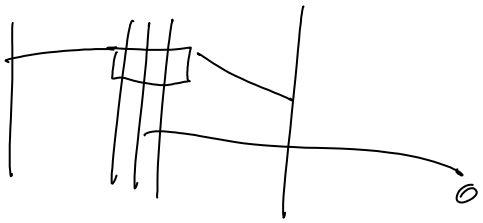
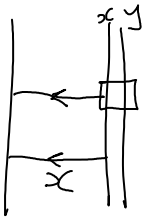
Scattering and Strand Doubling

December-28-08
10:36 AM



Perhaps I should be saving "partial scattering" information?

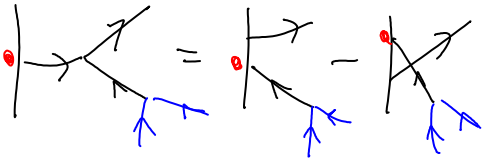


scatters to $x + H\left(\frac{1-e^{-x-y}}{x+y} y\right)$?

(compare w/ 2008-09/Another Attempt)

More reliably, with 2008-12/ScatterAndGlow-Experiments/Dec 28: $\longrightarrow H\left(\frac{1-e^{-x-y}}{x+y}\right)$

(yet x is unscattered by e^x)



$\Rightarrow$ It may be ~~seems~~ possible to trace a red dot on the active strand.

Warning: $\oint$ has zero scattering, but $\Delta(\oint)$ scatters non-trivially!

Question Therefore it must mean that [AT] are missing an equation. What is it?
