(u, v, and w knots) x (topology, combinatorics, low algebra, and high algebra)		
<p>1 [Witten Chern-Simons] u-knots </p> <p>u-knots are usual knots:</p> <p> R1  R2  R3 $=PA \langle \diagdown \diagup R123 \rangle_{0 \text{ legs}}$ [Rozansky]</p> <p>"Knots in \mathbb{R}^3"</p> <p>Extend any $V : \{u\text{-knots}\} \rightarrow A$ to "singular u-knots" using $V(\times) := V(\times) - V(\times)$, and think "differentiation".</p> <p>Declare "V is of type m" iff $V^{(m+1)} \equiv 0$, think "polynomial of degree m".</p> <p>$W = V^{(m)}$ roughly determines V; $W \in \mathcal{A}_m^*$ with</p> <p>$\mathcal{A}_m := \left\{ \begin{array}{c} \text{Diagram} \\ \text{with } n \text{ chords} \end{array} \right\} / \text{4T} \stackrel{\cong}{=} \mathcal{A}_m^*$</p> <p>Need a "universal" $Z : \{u\text{-knots}\} \rightarrow \mathcal{A} = \bigoplus \mathcal{A}_m^*$ [Laudenbach]</p>	<p>2 v-knots </p> <p>v-knots are virtual knots:</p> <p> VR123 $=PA \langle \diagdown \diagup R123 \rangle_{0 \text{ legs}}$ [Morton] $=CA \langle \diagdown \diagup R123 \rangle_0$ [Kauffman]</p> <p>"Knots on surfaces, modulo stabilization"</p> <p>All the same, except</p> <p>$V^w = V(\times) - V(\times)$ $V^v = V(\times) - V(\times)$ $A^w := \{\text{"arrow diagrams"}\} / 6T$</p> <p>Need a $Z : \{v\text{-knots}\} \rightarrow \mathcal{A}^w$.</p> <p>The 6T Relation (and a hidden 4T):</p> <p></p>	<p>3 w-knots </p> <p>"God created the knots, all else in topology is the work of mortals." Leopold Kronecker (modified)</p> <p>w is for welded, weakly v, and warmup.</p> <p>4 $\{w\text{-knots}\} = \{v\text{-knots}\} / (\text{OC})$ where OC is Overcrossings Commute:</p> <p> yet $\times \diagdown \diagup \neq \times \diagup \diagdown$ UC</p> <p>Related to "movies of flying rings" to knotted tubes in 4-space, and to "basis conjugating automorphisms of free groups".</p> <p>All the same, except</p> <p>$\mathcal{A}^w := \mathcal{A}^v / \text{TC}$ $\text{Need a } Z : \{w\text{-knots}\} \rightarrow \mathcal{A}^w$.</p> <p>"Tails Commute (TC)":</p> <p></p>
<p>5 topology</p> <p>Similar with metrized Lie algebras replacing arbitrary Lie algebras</p> <p>[Percec, Cvetkovic, Vogel]</p> <p>So Far: Invariants for any (\mathfrak{g}, R)</p> <p>$\{\text{knots}\} \xrightarrow{\text{Z}} \mathcal{A} \xrightarrow{T_R} \mathcal{U}(\mathfrak{g}) \xrightarrow{\text{Tr}_R} \mathbb{C}$</p> <p>high</p>	<p>6 combinatorics</p> <p>Similar with Lie bi-algebras replacing arbitrary Lie algebras</p> <p>[Hovey, Leung]</p> <p>7 low algebra</p> <p>Theorem. $\mathcal{A}^w \cong \mathcal{A}^{wt} := \left\{ \begin{array}{c} \text{Diagram} \\ \text{with } n \text{ chords} \end{array} \right\} / \text{TC}$</p> <p>This screams, if you speak the language. LIE ALGEBRAS</p> <p>And indeed we have</p> <p>Theorem. Given a finite dimensional Lie algebra \mathfrak{g}, there is $T : \mathcal{A}^w \rightarrow \mathcal{U}(\mathfrak{g}) := \mathcal{U}(\mathfrak{g} \ltimes \mathfrak{g}_{ab}^*)$.</p> <p>8 high algebra</p> <p>Knots are the wrong objects to study in knot theory! They are not finitely generated and they carry no interesting operations.</p> <p>11 high algebra</p> <p>Knotted Trivalent Graphs</p> <p>12 high algebra</p> <p>Switch to w-knotted trivalent tangles</p> <p>wKTT := $CA(\times, \times, Y)$.</p> <p>Theorem (\sim). A homomorphic Z is equivalent to proving the Kashiwara-Vergne statement.</p> <p>Statement (\sim, KV, 1978) (proven Alekseev-Meinrenken, 2006). Convolutional deformations of invariant functions on a group match with convolutions of invariant functions on its Lie algebra: for any finite dim. Lie group G with Lie algebra \mathfrak{g},</p> <p>$(\text{Fun}(G)^{\text{Ad } G}, \star) \cong (\text{Fun}(\mathfrak{g})^{\text{Ad } G}, \star)$.</p> <p>(Closely related to the "orbit method" of representation theory).</p> <p>[Alekseev, Torevian]</p>	
<p>10 high algebra</p> <p>Similar with Lie bi-algebras replacing arbitrary Lie algebras</p> <p>[Hovey, Leung]</p> <p>9 high algebra</p> <p>Theorem (\sim). A homomorphic Z is the same as a "Drinfel'd Associator". [Drinfel'd]</p> <p>13 high algebra</p> <p>Z is a Quantum Group?</p> <p>More precisely, a homomorphic Z ought to be equivalent to the Etingof-Kazhdan theory of deformation quantization of Lie bialgebras.</p> <p>[Etingof, Kazhdan]</p> <p>Dror's Dream: Straighten and flatten this column.</p> <p>An Idle Question.</p> <p>Is there physics in this column?</p>
