Title: 18 Conjectures.

Abstract: I will state 18=3x3x2 "fundamental" conjectures on finite type invariants of various classes of virtual knots. This done, I will state a few further conjectures about these conjectures and ask a few questions about how these 18 conjectures may or may not interact.

Another title idea: w-Knots, from Z to A.

Decision as of Feb 1:

Do the Z to A talk, and add a box to the handout "this has nothing and everything to do with the 18 in 1 conjecture of BHLK".

Decision as of mid March.

Prepare both and decide later.
