

Twisting KTG invariants

April-05-10
7:47 PM

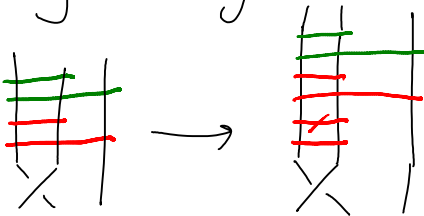

Problem Injecting a V-twist is not well defined if the V-twist is not central.

---- maybe twisting happens only at the ends?

Gooey twisting:

(assume $F^{12} = F^{21}$)

It seems that twisting should be thought of as the action of a groupoid, not a group. [or some similar intricacy]
