

Finish the v-story in time for this conference.

March 4: ☹️ not likely to happen. A poor man's substitute:

Do dotted-w right.

Another possibility:

W/CC from BCH to Lieberman

or simplified

The w-spiel for the ~~work~~ algebra

or possibly, with some change to the emphasis:

Scatter and Glow

April 4: Maybe in collaboration with Kazhdan,

Virtual Knots, Lie-bialgebras, and Quantization

Why not both?

OK, there's room for more goals:

Finish the integration of $dbnvp$ with bbs & with $hb.js$.
