

Null Twists in Aw and in \mathfrak{g}_0

November 13, 2016 11:51 AM

In[12]: $F ** (F // d\sigma[y, z] // d\Delta[x, x, y])$

$\alpha_{xy} = 0$

Out[12]: $Es[(\bar{x} \rightarrow LS[0, \overline{xy} \alpha_s[x, y] + \overline{xz} \alpha_s[x, y] + \overline{yz} \alpha_s[x, y], \dots], \bar{y} \rightarrow LS[\bar{x}, \overline{xz} \alpha_s[x, y] + \overline{yz} \alpha_s[x, y] + \overline{xy} \beta_s[x, y], \dots], \bar{z} \rightarrow LS[\bar{x} + \bar{y}, \overline{xz} \beta_s[x, y] + \overline{yz} \beta_s[x, y], \dots]), CWS[0, 2 \overline{xx} \gamma_s[x, x] + 2 \overline{xy} \gamma_s[x, x] + \overline{yy} \gamma_s[x, x] + \overline{xy} \gamma_s[x, y] + \overline{xz} \gamma_s[x, y] + \overline{yz} \gamma_s[x, y] + \overline{yy} \gamma_s[y, y] + \overline{zz} \gamma_s[y, y], \dots)]$

In[11]: $(F // d\sigma[\{x, y\} \rightarrow \{y, z\}]) ** (F // d\Delta[y, y, z])$

$\beta_{xy} = 0$

Out[11]: $Es[(\bar{x} \rightarrow LS[0, \overline{xy} \alpha_s[x, y] + \overline{xz} \alpha_s[x, y], \dots], \bar{y} \rightarrow LS[\bar{x}, \overline{yz} \alpha_s[x, y] + \overline{xy} \beta_s[x, y] + \overline{xz} \beta_s[x, y], \dots], \bar{z} \rightarrow LS[\bar{x} + \bar{y}, \frac{\overline{xy}}{2} + \overline{xy} \beta_s[x, y] + \overline{xz} \beta_s[x, y] + \overline{yz} \beta_s[x, y], \dots]), CWS[0, \overline{xx} \gamma_s[x, x] + \overline{yy} \gamma_s[x, x] + \overline{xy} \gamma_s[x, y] + \overline{xz} \gamma_s[x, y] + \overline{yz} \gamma_s[x, y] + \overline{yy} \gamma_s[y, y] + 2 \overline{yz} \gamma_s[y, y] + 2 \overline{zz} \gamma_s[y, y], \dots)]$

no fixing this.

The problem: No fixing

Yet e^{b_1, c_2} seems like a legit null twist in \mathfrak{g}_0 .
