

- 1. If a whole is divided in 60 equal parts, then each part represents 1.66667 %**
- 2. If only 52 parts are allocated then the 8 unassigned parts represent 13.33333% of the original whole.**
- 3. The 52 allocated parts are 86.66667% of the whole.**
- 4. If the 8 unallocated parts are expressed as a percentage of the 52 allocated parts, together these amount to 15.38461%.**
- 5. Adding 15.38461% to each allocated part increases each individual part's allocation from 1.66667 to 1.92308 %.**
- 6. The same result is achieved by using 52 equal parts. Each equal part amounts to 1.923076923%.**
