

# RRRR

July 23, 2018 6:19 PM

We require that  $R_{ij}$  is invertible in two senses: There should exist  $P^{ij} \in Hom_{\mathcal{D}}(\{i, j\}, \emptyset)$  and  $P^{ji} \in Hom_{\mathcal{D}}(\emptyset, \{i, j\})$  such that  $R_{ij}P^{jk} = \tilde{id}_i^k$  and  $R_{ji}P^{kj} = \tilde{id}_i^k$  and  $R_{i_1j_1}R_{i_2j_2}^{-1}\tilde{m}_i^{i_1i_2}\tilde{m}_j^{j_1j_2} = \tilde{1}_i\tilde{1}_j$ . Second satisfies the following two equations:

$$R_{32}R_{14}\bar{m}_6^{42}P^{6,-5}\tilde{m}_{-5}^{-1,-3}R_{-1,-2}R_{-3,-4} = \tilde{m}_1^{5,-5}\tilde{m}_3^{7,-7}R_{56}R_{78}R_{-5,-6}R_{-7,-8}\bar{m}_{-4}^{8,6}\bar{m}_{-2}^{-8,-6}$$

For one with bars replaced by tildas (and a little swap), see the figure for a picture:

Figure 6: Equation for  $R$ , odd numbers are blue and belong to  $\tilde{\mathcal{M}}$ .
