Pensieve header: A fresh implementation of baby DoPeGDO. Continued pensieve://2020-12/.

Scheme: $\mathbb{E}\_[\_] /\!/ \mathbb{E}\_[\_]$ calls FZip or Zip, which are functionally the same. Zip works by handling the quadratic part and calling PZip for the perturbation-only part. PZip works by iteratively solving the synthesis equation. FZip works by encapsulating coefficients, calling Zip, and back-substituting.

Variables and their duals:

```
{y*, x*} = {η, ξ};
{η*, ξ*} = {y, x};
(u_i_)* := (u*)i;
```
