

AN UNEXPECTED CYCLIC SYMMETRY OF Iu_n

Specific comments:

- (1) page 4, applications to computability of knot invariants: might benefit from a source...
- (2) proof of Thm 2: what would be affected by choosing a different pairing for a and b (related to footnote 2)?
- (3) Note 4: "[17]: With" to be turned into "[17]. With"
- (4) weird letter f floating around in entry [11] of the references
