Hefei-1811 Post Mortem

November 8, 2018   2:10 AM

I should try to produce a "traditional" version of the CWOR talk: Full definitions, few or no proofs, A to Z order:
1. H, H*, R, P.
2. Gaussians and the consolidated operations.
3. The double and implementation.
4. Use in tangle theory.
5. Uses of tangle theory: algebraic knot theory.

I can then show the slides (at least partially) in the reverse order.

Ready for Ohio State Jan 29?

Use "plain latex" rather than xfig for global handout structure?
