should respect GT (better check). Will not respect TC!

There's also "simple translation":

Also respects GT but not TC.

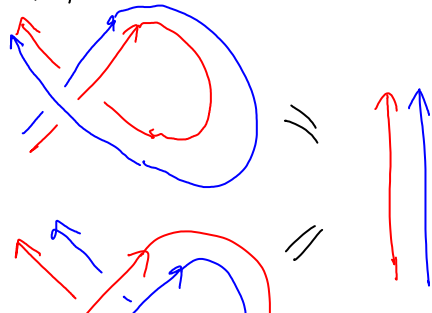

Aside: does it make sense to mod out by TC on some strands and by HC on others? With this, some of these ops maybe be well defined.

Question What is the set of all such operations?

Question (Added Nov 22) Is there a TG version of these operations?

Question (Added Nov 23) Is

Aside: Behaviour under R1:

Question (Added Nov 23) Is

There a "mirror just one strand"

version ?

(Probably not in
general, though "yes"
for flat v-knots)
