

Pensieve header: Formal Gaussian integration over an arbitrary “Feynman Ring”.

What must a Feynman Ring F have? (Over some set of labels S with elements x, y, \dots)

- * A vector space over \mathbb{Q} .
- * Has a symmetric linear $Z \mapsto \partial_{x,y} Z$ and a symmetric bilinear $(Z_1, Z_2) \mapsto (\partial_x Z_1)(\partial_y Z_2)$ that satisfy the axioms of (roughly) a connected circuit algebra.
- * Has $q_{x,y} : F \rightarrow \mathbb{Q}$ in some sense dual to some $\theta_{x,y} \in F$.
- * Has $\text{Ev}_{vs \rightarrow 0} : F \rightarrow F$.

Further axioms must be worked out.

Goals.

- * Define \int .
- * Prove a Fubini theorem.
- * Prove a theorem about the injectivity of the Laplace transform.
