102km with 610m of climbs, the day before a conference in Banff. Was great, except I had two flat tires! The first I fixed on the spot, using my spare inner tube. Like a good boy before installing the new inner tube I checked carefully to see that whatever sharpie was responsible for the puncture was no longer there. But then I had a second flat in the same tire, and I no longer had a spare inner tube. So I made a few phone calls and found a lovely bike shop a few kilometers away that had the right-sized inner tubes and was willing to install them right away, on a Sunday. The guy there looked much harder than me, and eventually found the culprit - a tiny shard of glass that got embedded in the tire and was barely visible from both the outside and the inside.
<p>The first picture is from the day before at the Calgary Airport.
